

A Guide to Open Access at Cambridge

Taking Knowledge Forward

What is Open Access (OA)?

Open Access (OA) has become an important way to make research findings freely available for anyone to access and view. Cambridge Open serves authors and the wider community by publishing highquality, peer-reviewed OA content.

Open Access also means that as long as the original source is acknowledged and cited, readers are allowed to redistribute, re-use and adapt the content in new works (in accordance with the Creative Commons licence selected).

There are two types of **Open Access**; **Gold Open Access**, also known as Open Access Publishing, and **Green Open Access**, also known as **Open Access** Archiving or Self-Archiving.

What are the benefits of Open Access?

→ Discoverability and dissemination

As an author, you can benefit from the open availability of your research to others, potentially leading to an increase in the visibility and usage of your work.

→ Educational and other re-use –

Gold Open Access works can often be re-used without needing to request additional permission from publishers. This means that your work could be re-published in a university course package, or translated into a different language.

→ Public access and engagement -

OA means greater access for society at large and potentially greater public engagement with research. **OA** can help professionals outside of academia who rely on research, such as health workers, teachers and lawyers, benefit from access to the latest findings.

Your work is subject to the same high standards and procedures as for our other publications. This includes editorial processes such as peer review, production processes of design and typesetting, through to marketing and dissemination.

What is Gold Open Access?

The route by which content is made available as Open Access by the publisher, under a Creative Commons licence in a book or journal, usually on payment of a one-off charge.

Gold Open Access is an alternative to subscriptions and other access payments. Content is published under a Creative Commons license that allows free access and redistribution and, in many cases, allows re-use in new or derivative works.

Typically, but not always, Gold Open Access content is supported by an Article Processing Charge (APC) paid by the author or their funder. We also publish Gold Open Access content that is supported by other financial models, particularly in humanities and social sciences.

What is Green Open Access?

The route by which research content is made available as Open Access by being deposited in a repository by the author, institution or publisher.

Green Open Access (also known as Green Archiving) is the practice of making a version of a work freely accessible in an institutional or subject archive or some other document repository.

Cambridge University Press has a set of policies to allow authors, librarians and others to meet the Green Open Access requirements of their institutions and funders. Our Green Open Access policies for both books and journals can be found at: **cambridge.org/openaccess**

Open Access and journal articles

Gold Open Access and journals

Both our fully Gold Open Access and our hybrid journals allow authors to publish articles under Creative Commons (CC) licenses, thereby enabling readers to freely access and re-distribute their articles.

We encourage the use of CC-BY licences for Gold Open Access journal articles, but authors are able to choose more restrictive CC licences if they wish to prevent commercial use or adaptation in new works.

Green Open Access and journals

Funders and other institutions are increasingly adopting policies that require research articles funded by them to be deposited and made freely available in institutional or other repositories.

Green Open Access applies to all our journal articles, but it is primarily designed to support OA for articles that are otherwise only available by subscription or other payment. For that reason, we are more restrictive in what we allow under Green Open Access in comparison with Gold Open Access

- The final, published version of the article cannot be made Green Open Access, only the abstract and link to the final article may be shared.
- The Green Open Access version of the article is made available to readers for private research and study only (see also Information for repositories, below). We do not allow Green Open Access articles to be made available under Creative Commons licences.

Where can I post my article and which version? Please visit cambridge.org/openaccess to see this information.

Open Access and books

Gold Open Access and books

We offer authors the option of publishing their work as Open Access to allow them to make their works freely available online without compromising any aspect of the publishing process. Typically, we offer this option only for monographs, which are books usually written by a single author to convey the results of their research and analysis in a particular field of study.

We encourage interested authors to contact the relevant subject editor to discuss options: contact details available online.

Green Open Access and books

Our Green Open Access policy allows you to post a portion of your monographs online. This policy does not apply to textbooks, professional books for practitioners, or works of reference, no part of which may be posted online without our prior approval. The work is contracted under standard publishing terms and therefore any reproduction of the posted text is governed by the usual copyright restrictions.

While your manuscript is under review with us and before it is under contract, you may deposit it as you wish. However, there are restrictions on how much you may post online of the final version that has been accepted at the start of production – as well as of the published book.

Read full details of our OA policies online at **cambridge.org/openaccess**

Is there funding available?

Upon publication/acceptance of your article you will have the choice to publish your article Open Access if offered by the journal. Please discuss with your institutional funder for further information.

For more information and details on how you can become an OA author, please contact **openaccess@cambridge.org**
